Education

McMaster University

Hamilton, Canada

B.Eng. in Computer Engineering (Co-op)

9/2016 - 6/2021

Experience

BMO Capital Markets

Toronto, Canada

Software Development Intern

5/2019 - 8/2019

- Improved data log analysis processing time by 50%, by integrating Splunk to implement a centralized logging system
- Enhanced functionality of stock market platform by working with REST APIs and using development framework tools
- Utilized Kanban board for agile project management and followed proper SDLC procedures

BMO Bank of Montreal

Toronto, Canada

Software Development Intern

9/2018 - 5/2019

- Eliminated over 30 hours of manual work per month by automating generation of reconciliation reports using Oracle PL/SQL and UNIX bash shell scripting tools
- Demonstrated trust to high profile clients with over \$20MM by strengthening web functionality for the investment firm
- Reported, tracked, and verified issues using JIRA, Confluence, and Veracode

Buckland Customs Brokers

London, Canada

Jr. Developer Co-op

5/2017 - 9/2017

- Improved load times of reports on the international trade web platform (used by 80+ major automotive manufacturers including Toyota and GM), by updating over 20TB of entry data using Microsoft SQL Server, JavaScript, and C#
- Tracked and managed tickets using Asana and YouTrack

Skills

Languages Python, Java, C#, SQL, HTML, CSS, JavaScript

Technologies Node.js, Express, Flask, ASP.NET

Tools Git, Unix, Bash, JIRA

Certifications Microsoft Certified: Azure Fundamentals

Projects

Presentation Assistive Coach

Final Year Design Project

McMaster University

- Python built self-learning software tool for presenters by providing personalized feedback
- Used audio wave analysis with speech-to-text to determine proper emphasis, and a visual classifier dataset for body language
- Implemented open-source projects including Tensorflow PoseNet, CMU Sphinx, and Scikit-learn Machine Learning

Soil-ent

MHacks 2019 - Winner

University of Michigan

- Real time monitoring of soil health data to a React dashboard. Sensor updates are processed through an Arduino to a Flask/Python web server, with the data saved in Google's Firebase

Concert Finder

Web systems and design course - CS4WW3

- Website project to view/add reviews for local concert arenas. Built with React, Node.js, MongoDB, and Google Maps API
